## Application

The JOHNSON CONTROLS STANDARD electric damper actuator series is designed to operate air dampers in ventilation and air conditioning systems.
The compact design and universal adapter fitted with limitation of rotation angle make this JOHNSON CONTROLS actuator highly versatile.

## Features

- DC $0(2) \ldots 10 \mathrm{~V}$ control signal
- Up to 5 actuators in parallel operation possible
- Plug-in terminal block connection
- Simple direct-mount with univer-sal adapter on $10 \ldots 20 \mathrm{~mm}$ Ø round-axis or $10 . . .16 \mathrm{~mm}$ square shaft
- 48 mm minimum damper shaft lenght

Selectable direction of rotation

- Limitation of rotation angle
- Manual release button
- 2 adjustable auxiliary switches
- Automatic shut-off at end position (overload switch)
- Actuators available with1m cable
- Customized versions available
- Devices meet CE requirements

## Accessories

- M9000- ZK Damper linkage selection
- M9000- ZKG Ball joints

Factory setting:
Switch a at $10^{\circ}$ Switch b at $80^{\circ}$

The switching position can be manually changed to any required position by turning the ratchet.

## Position transmitter

The M91..-GD.-1Ncan also be controlled using the JOHNSON CONTROLS Positioner (PA/PF) with control signal of DC $0(2) \ldots 10 \mathrm{~V}$. For further information concernin the PA and PF positioner please refer to sheet 6.20.

Caution: A maximum of
5 actuators can be controlled in parallel operation.

## Override control

## Rotation Angle

## Limitation of rotation angle

The limitation or rotation angle can be set in $5^{\circ}$ steps by moving the adapter.

The adapter can be removed simply by pressing the adapter clip on the underside of the actuator.

The actuator
M91..-GD.-1N can be forced to override control when wired in accordance with the relevant diagram on the left.

## Switch position:

1 = Actuator runs at 10 V
$2=$ Actuator runs at $0(2) \mathrm{V}$
3 = Automatic control
